Press Release

2004.12.16

Optiviva Inc. (Guangzhou, China & Los Altos, California) has successfully passed their ISO 9001 Quality Management System audit carried out by the well-known auditor SGS. SGS strongly endorsed the excellent quality management systems established by Optiviva. During their two days audit on December 15-16, 2004. SGS carefully and strictly verified each process and procedure for all departments within Optiviva (QA, Optical Engineering, Sales & Marketing, MEMS Technology, Manufacturing and HR.). The findings from their audit were that all departments within Optiviva meet and exceed quality management system requirement by ISO 9001 standard.

ISO9001 is the most widely accepted Quality Management System in the world. From the first day of company launch, Optiviva set their goal to become ISO9001 qualified within one year. Optiviva trained each of their employees on ISO9001. All company related processes, procedures and related documents were established based on the regulations of ISO9001. This was done to ensure every department at Optiviva was doing high quality work and producing high quality products. After nearly a half-year of hard work and efforts on behalf of every employee, Optiviva achieved their goal. For a new company, established not more than 1 year ago, achieving ISO9001 accreditation is a very significant accomplishment.

Optiviva's ISO9001 qualification provides current and future partners with a strong guarantee of quality management from a respected and authorized third party. This success is not only an important landmark on Optiviva's business roadmap but will also be serving to gain Optiviva recognition and support by more and more customers as well. Obtaining ISO qualification is an important step in Optiviva's objective to become a leader in the field of MEMS technology and fiber optics communications.

Product information can be downloaded from our website, and product orders can be placed via phone or at www.optivivainc.com.
